**Additional Ordering Notes**

CT Abdomen will only include from the top of the diaphragm to the top of the iliac crest. If the patient is experiencing any lower quadrant pain, if appendicitis is suspected or if you have concerns about the colon, small bowel or any pelvic organs then you must order a CT Pelvis as well.

Premedication is required for some patients receiving intravenous contrast, including patients with a known contrast allergy, patients with a history of severe allergic reaction and patients with asthma who use inhalers daily. A.A.D. will provide the prescription for the premedication at the time of scheduling.

Patients over 59 years of age, patients with renal disease and diabetics need to have a **DOCUMENTED** normal BUN and creatinine within the last 3 months.

Pacemakers, ocular metallic foreign bodies, mechanical ear implants, non-removable TENS units, any wire loop devices are all examples of devices that are incompatible with MRI.

This form is only a guide to ordering CT & MRI exams. If you have any questions regarding which exam may be appropriate for your needs, please call one of our AAD sites and ask for the Radiologist. After hours, you may call the Radiology Department at the hospital where there is a Radiologist from 7a.m. till 11p.m. at 443-481-4905.
